RE: **Private Facilities Permit Application Approval**
Norman - Pier- 8993 Unity Church Road

Dear Sir/Madame:

This office has reviewed your Private Facilities permit application(s) and is authorizing the building of the structure(s) subject to the following conditions:

- The construction of the facility must be completed as described in the approved application and within twelve (12) months from the date of this approval.
- Lake Services must be notified upon completion of the structure(s) so the lake use permitting process can be completed; a permit tag will be attached at final inspection (if one is not already present on an existing structure).
- Please place a copy of this letter in a watertight plastic bag and post it along the shoreline where you are implementing your approved activity.
- New, expanded or rebuilt facilities or mooring buoys must be situated or constructed in size, dimension, or design such that an average-size (10 foot minimum) moored watercraft will not interfere with access to other facilities and not obstruct ingress and egress of watercraft.
- This approval is valid to construct a dock as described in the application. It is the applicant's responsibility to ensure that the structure does not exceed the footprint detailed in the application (740 square feet) or extend into the lake more than 78 feet. The applicant must ensure that all portions of the facility are located a minimum of 10 feet inside the projected property lines. Please note that the proposed placement of the facility is within close proximity of the Projected Property Line shared with the adjoining property to the left (from the perspective of standing on land looking toward the water); placement of the facility within 10 feet of this Projected Property Line may result in the private facility permit being revoked. A minimum maneuvering distance of at least 25 feet must be provided between the subject facility and any existing permitted facilities. The facility must be situated as to not interfere with navigation to the existing facility to the right.

Note: Permittees must immediately notify Duke and stop all work if historical or archeological resource are discovered during the implementation of an authorized project.

Please note: This approval does not approve electrical service on dock or piers. Lot owners should contact their county Buildings and Codes office for electrical service requirements and/or restrictions. Some counties may restrict submersible pumps in the lakes.

Thank you for your cooperation with this program. If you propose to build any additions, make any modifications, including maintenance, or have any further questions, please contact me at 704-574-4065.

You may also email lakeservices@duke-energy.com or you may call 1-800-443-5193 and select the appropriate option.

Sincerely,

A handwritten signature in black ink, appearing to read "Chad Broadway".
